

TABLE OF CONTENTS

VI	CHAIRMAN'S ADDRESS
VII	PREFACE
VIII	ACKNOWLEDGEMENTS
IX	COMMITTEES
XII	ORGANISERS

KEYNOTE LECTURE	3	Copper Metallurgy: Past, Present, and Future. <i>Fathi Habashi</i>
PLENARY CONFERENCES	7	GALVANOX™ – an Opportunity for Existing Copper Flotation Concentrators to Improve Overall Project Economics. <i>Linus Sylwestrzak, Ken Baxter, John Turney and David Dixon</i>
	8	Technical Options for the Treatment of High Arsenic Concentrates. Pyro-metallurgy v/s Hydro-metallurgy, the Well Known and Classical Dilemma. <i>Claudio Hurtado-Guzmán, Marcelo Jo, Mike Hourn and Rubén Inostroza</i>
	9	Arsenic Stabilization by Hydrothermal Synthesis of Alunite-Type Phases. Application to the Copper Metallurgy. <i>Joan Viñals, Montserrat Cruells, Alba Sunyer, Laura García and Victoria Beltrán</i>
	10	Acid Management in Heap Leaching. Are we Doing Right? <i>Cristian Salgado, Carlos Pérez, Cristián Alvañay and Gabriel Zárate</i>
CHAPTER 01 Geometallurgy	13	Application of Cokriging for Geometallurgical Models of Leaching in Sulphide Radomiro Tomic Project. <i>Rodrigo Riquelme, Carlos Cisterna, Jaime Díaz and Ricardo Boric</i>
	14	A Study of Acid-Gangue Reactions in Heap Leach Operations. <i>Ali Seyedbagheri, Petrus Van Staden and Chris McLaren</i>
	15	Validation by Means of the Qemscan Technique of Mineralogical Mapping Used as a Base for the Bioleaching Model in the Radomiro Tomic (RT) Copper Sulfide Mine. <i>Jaime Díaz, Carlos Cisterna, Rodrigo Riquelme and Ricardo Boric</i>
	16	State of the Art of Mineral Characterization of Copper Ores in the Leaching Process. <i>Oswaldo Maldonado</i>
CHAPTER 02 Best Practices & Process Innovations	19	The Cyanide Method of Copper and Copper-Gold Production. <i>John Lombardi</i>
	20	Advanced Wireless Monitoring and Integrated Information Management for Improving Electro-Refinery Performance. <i>Ari Rantala, Martti Larinkari and Tirso Meneses</i>
	21	UHC Copper Refinery: An Update on the Vale Project Based on CESL Technology. <i>Norman Hayton, Jennifer Defreyne and Kevin Murray</i>

- 22 **The Phoenix Run-of-Mine Copper Leach Project in Northern Nevada USA.** *Sevket Acar, Michael Nees and James Sorensen*
- 23 **Model Visualization for Hydrometallurgical Processes.** *Rodrigo Aravena, Luis Cisternas and Miguel Meza*
- 24 **Dust Control in Ore Unloading to Stockpiles.** *Guillermo Velarde*
- 25 **Heap Characterization and Monitoring with Electrical Resistivity for Optimizing Secondary Leaching.** *Dale Rucker and Jim Fink*
- 26 **Hydrometallurgical Operational Management Strategies.** *Eduardo Riveros, Osvaldo Bascur and Roberto Linares*
-
- CHAPTER 03** 29 **Kinetics and Mechanisms of Leaching Copper Minerals.** *Fathi Habashi*
- Leaching Process
Developments
- 30 **Rapid Atmospheric Leaching of Enargite in Ferric Sulfate Media.** *Berny Rivera and David Dixon*
- 31 **Leaching of Gold from Refractory Sulphide Concentrates.** *Matthew Jeffrey, Byron Benvie and Robbie McDonald*
- 32 **Economical Considerations in the Analysis of Alternative Processes for the Treatment of Copper Sulphides.** *Eduardo Robles*
- 33 **Pressure Leaching of Sulfidized Chalcopyrite-Enargite Concentrate.** *Rafael Padilla, Gerardo Rodríguez and María C. Ruiz*
- 34 **Pressure Leaching of White Metal: a Low Pollution Alternative to Conversion.** *María C. Ruiz, Esteban Abarzúa, Eduardo Gallardo and Rafael Padilla*
- 35 **Leaching of Chalcopyrite Concentrate by Sodium Nitrate in Sulphuric Acid.** *Miroslav Soki, Branislav Markovi, Vladislav Matkovi, Dragana Živkovi and Nada Štrbac*

CHAPTER 04
Environmental Topics

- 39 **New Mist Suppression Agent for Copper Electrowinning.** *Jack Bender and Jeffrey Thompsen*
- 40 **Control of Impurities for Copper Acid Leaching Solutions. Part I: Solubility in Water at Several Temperatures and Several NaCl Concentrations of Sulphate Aluminium-Potassium Hydrated Double Salt.** *Sergio Rivera, Bárbara Brito, Ademir Ramírez and Nelson Parra*
- 41 **Control of Impurities for Copper Acid Leaching Solutions. Part II: How to Produce Sodium Sulphate from Sulphate Aluminium-Potassium Hydrated Double Salt and the Impact in the Heap Leaching Copper Recovery Process** *Sergio Rivera, Bárbara Brito, Ademir Ramírez and Nelson Parra*
- 42 **Engineered Membrane Separation® (EMS®) Systems for Hydrometallurgical Applications.** *Larry Lien*

- 43 **Fixation of Arsenic and Antimony from Copper Smelter Flue Dust and Electrorefinery Bleed-Off as Crystalline Scorodite.** *Felipe Lagno, Iván García, Claudio Ledesma, Andrés Reghezza, George Demopoulos, Levente Becze, Mario Gómez and Lydia Katsarou*
- 44 **LATERALVEX: Acid Mist Control System in EW Cells using Exhaust by Lateral Inner Ducts and Multiple Curved Covers.** *Fernando Penna, Cristián Villaseca and Rodrigo Villarroel*

CHAPTER 05

Best Practices In SX & EW

- 47 **Plant Design and Operational Aspects in Solvent Extraction Impurity Control.** *Hannu Laitala, Jarkko Hakkarainen and Claudio Rodríguez*
- 48 **Integral Robotic Cathode Harvesting System.** *Luis Ramírez, Luis Baeza and Rodrigo Madariaga*
- 49 **Experiences on High Current Controlled Rectifiers to Increase the Copper Production in SX-EW Plants.** *Ricardo Fuentes, Patricio Lagos, Luís Neira, Christian Geikowsky and Gerardo Pacheco*
- 50 **Nitration in Copper SX? Cytec Acorga Provide a New Reagent.** *Héctor Yáñez, Alexis Soto, Matthew Soderstrom and Troy Bednarski*

CHAPTER 06

Biometallurgy

- 53 **Dynamics of Biodiversity in Bioleaching Processes.** *Blanca Escobar, Eloisa Alcaino, Paulina Brusadelli, Juan Pablo Egueta and Oriana Salazar*
- 54 **Laboratory and Demonstration Scale Operation of the Caraiba Heap Leach Using GEOCOAT®.** *Michael Gunn, Pamela Tittes, Paul Harvey, Enrique Carretero, Paulo Medeiros da Silva and Jair Paula de Souza*
- 55 **Bacterial Leaching of Complex Sulphides from Mine Tailings Altered by Acid Drainage.** *Willy Kitobo, A. Ilunga, Jean Frenay, Stoyan Gaydardzhiev and David Bastin*
- 56 **Bioleaching of Copper Sulphides Flotation Concentrate using Consortium of Mesophiles and Thermophiles Microorganisms: a Pilot Scale Approach.** *Renata de B. Lima, Carlos Gomes de Souza, Luis Sobral, Débora Monteiro de Oliveira, Selma Leite and Paulo Medeiros*

CHAPTER 07

Process & Developments

- 59 **The Mechanism of the Incorporation of Lead into Copper Cathodes.** *Manickam Minakshi and Michael Nicol*
- 60 **The Future of SX Plant Design for Modern Hydrometallurgical Refineries.** *Eduardo Robles, Scott Poulter, Ross Haywood, Ilne Cronje and Máximo León*
- 61 **Effect of Mn-Fe-Co In the Electrolyte and PbCaSn Anode Mechanical Properties on the Lead Oxide Layer Morphology.** *Juan P. Ibáñez and Jorge Ipinza*
- 62 **High-Current DC-Switchgear Devices for Copper Electrolysis.** *Frank Wachendörfer*
